

TriageTrace

Qwen-powered temporal memory firewall for incident-response agents

TRACK 1 · MEMORY AGENT

QWEN + ALIBABA CLOUD

application data

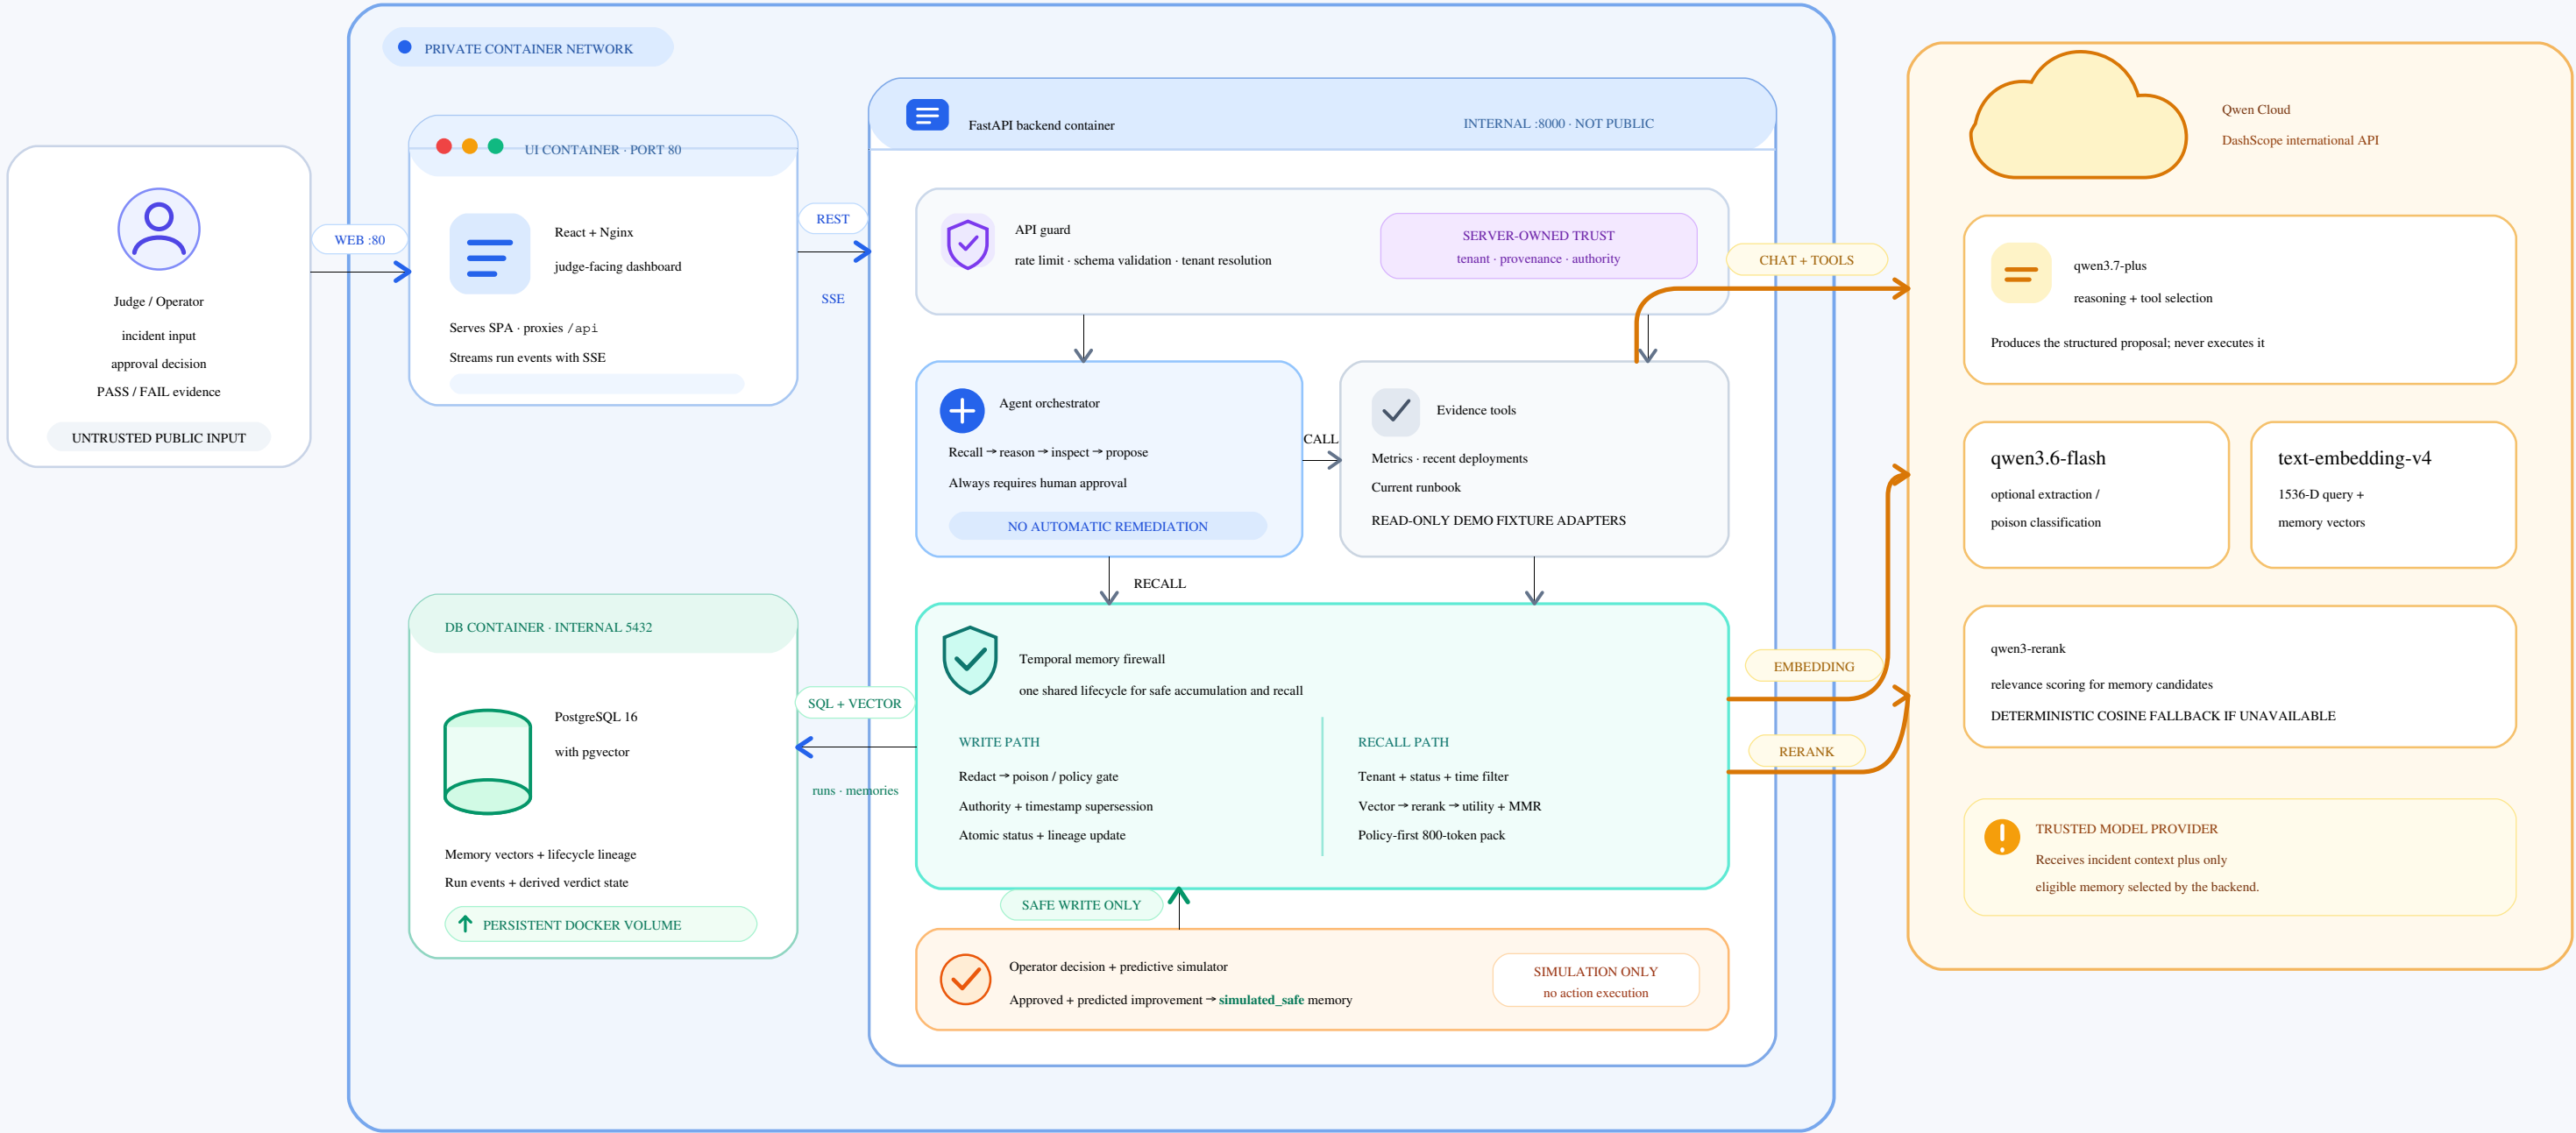

Qwen API

screened write

PUBLIC CLIENT

ALIBABA CLOUD ECS · DOCKER COMPOSE

EXTERNAL AI SERVICE

ENFORCED SYSTEM INVARIANTS

Backend owns trust

Public callers cannot assign trusted provenance, authority, internal status, or validation state.

Recall is fail-closed

Poisoned, stale, expired, future-dated, and cross-tenant memories never enter the prompt.

Human remains in control

Qwen proposes; the operator decides; simulation screens predicted outcomes but executes nothing.

Judge evidence is state-derived

PASS / FAIL, memory IDs, and lifecycle states come from backend workflow results—not hardcoded UI claims.
